1 What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) **print**(**func**(**30**, **75**)) a) 10 **b)** 20 c) 15 **d**) **0** Ans : c) 15 2 numbers = (4, 7, 19, 2, 89, 45, 72, 22) $sorted_numbers = sorted(numbers)$ even = lambda a: a % 2 == 0 even_numbers = filter(even, sorted_numbers) print(type(even_numbers)) a) Int b) Filter c) List d) Tuple Ans: b) Filter 3) As what datatype are the *args stored, when passed into a) Tuple b) List c) Dictionary d) None Ans: a) Tuple 4) $set1 = \{14, 3, 55\}$ $set2 = \{82, 49, 62\}$

set3={99,22,17}

| print(len(set1 + set2 + set3)) |
|---|
| a) 105 b) 270 c) 0 d) Error Ans: d) Error |
| 5) What keyword is used in Python to raise exceptions? |
| a) raise |
| b) try |
| c) goto |
| d) except |
| Ans: a) raise |
| 6) Which of the following modules need to be imported to handle date time computations in Python? |
| a) timedate |
| b) date |
| c) datetime |
| d) time |
| Ans: c) datetime |
| 7) What will be the output of the following code snippet? |
| print(4**3 + (7 + 5)**(1 + 1)) |
| a) 248 b) 169 c) 208 d) 233 Ans: c) 208 |
| 8) Which of the following functions converts date to corresponding time in Python? |
| a) strptime |
| b) strftime |
| c) both a) and b) |
| d) None |
| Ans: b) strftime |

9) The python tuple is _____in nature.

- a) mutable
- b)immutable

| c)unchangeable |
|--|
| d) none |
| Ans: b) immutable |
| |
| |
| 10) 10) |
| Theis a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop. |
| A. range()B. set()C. dictionary{}D. None of the mentioned aboveAns : range () |
| Question 11 |
| Amongst which of the following is a function which does not have any name? |
| A. Del function B. Show function C. Lambda function D. None of the mentioned above Ans: c) Lambda function |
| Question 12 |
| The module Pickle is used to |
| A. Serializing Python object structure B. De-serializing Python object structure C. Both A and B D. None of the mentioned above Ans: c) Both A and B |
| Question 13 |
| Amongst which of the following is / are the method of convert Python objects for writing data is a binary file? |
| A. set() methodB. dump() methodC. load() methodD. None of the mentioned above |

Ans : dump() method

Amongst which of the following is / are the method used to unpickling data from a binary file?

A. load() B. set() method C. dump() method D. None of the mentioned above Ans: load() 15. A text file contains only textual information consisting of _____. A. Alphabets B. Numbers C. Special symbols D. All of the mentioned above Ans: d. All of the mentioned above 16 Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.) captains = { "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", } Enterprise Picard, Voyager Janeway Defiant Sisko a) for ship, captain in captains.items(): print(ship, captain) b) for ship in captains:

print(ship, captains[ship])

c) for ship in captains:

```
print(ship, captains)
             d) both a and b
Ans : d) both a and b
17)
 Which of the following lines of code will create an empty dictionary named captains?
     a) captains = \{dict\}
     b) type(captains)
    c) captains.dict()
    d) captains = \{ \}
Ans : d) captains ={}
 18) Now you have your empty dictionary named captains. It's time to add some data!
 Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway",
 and "Defiant": "Sisko".
 Which of the following code snippets will successfully add these key-value pairs to the
 existing captains dictionary?
     a) captains{"Enterprise" = "Picard"}
     captains{"Voyager" = "Janeway"}
     captains{"Defiant" = "Sisko"}
     b) captains["Enterprise"] = "Picard"
     captains["Voyager"] = "Janeway"
     captains["Defiant"] = "Sisko"
     c) captains = {
       "Enterprise": "Picard",
       "Voyager": "Janeway",
       "Defiant": "Sisko",
     }
```

d) None of the above

```
Ans: c) captains = {

"Enterprise": "Picard",

"Voyager": "Janeway",

"Defiant": "Sisko",

}

19 ) You're really building out the Federation Starfleet now! Here's what you have: captains = {

"Enterprise": "Picard",

"Voyager": "Janeway",

"Defiant": "Sisko",

"Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
    print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
    print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
    print(f"The {ship} is captained by {captain}.")
d) All are correct
    Ans: b)for ship, captain in captains.items():
    print(f"The {ship} is captained by {captain}.")
```

20)

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
```

```
"Enterprise": "Picard",

"Voyager": "Janeway",

"Defiant": "Sisko",

"Discovery": "unknown",
}
```

What statement will remove the entry for the key "Discovery"?

- a) del captainsb) captains.remove()c) del captains["Discovery"]d) captains["Discovery"].pop()Ans : del captains
